

**The American
Pathology Foundation**
The Management Association for Pathology

End Coding Losses Today!!!
**Complete CPT, PQRS & ICD Code Instructions
for Pathologists & Histo/Cyto Laboratories**
Pay as little as \$479 for a Full Year
Pathology Service Coding Handbook

End CPT, PQRS and ICD coding losses forever! Stay up-to-date with NCCI, MUE, NCD and more. Receive four quarterly editions, plus special bulletins as issued, when you subscribe to APF's *Pathology Service Coding Handbook*.

Pathology Service Coding Handbook is the only comprehensive (more than 625 pages) guide to CPT, PQRS and ICD coding for anatomic and clinical pathology services on the market today. Disciplines covered in the electronic text are surgical pathology, cytopathology (including Pap test), dermatopathology, hematopathology, neuropathology, renal pathology, blood bank and transfusion medicine, molecular pathology, cytogenetics, clinical test interpretations and consultations, and more. The manual includes medical reporting considerations; Medicare's National Correct Coding Initiative (NCCI), Medically Unlikely Edit (MUE), Local Coverage Determination (LCD), and National Coverage Determination (NCD) rules; ICD diagnosis coding; Medicare's Physician Quality Reporting System (PQRS) bonus; and much more. Several crib sheets help you speed your daily coding work without sacrificing accuracy.

Handbook is designed for on-screen use as an electronic guidebook. Bookmarks and cross-links embedded in the electronic text take you instantly to the procedure, code, or rule you're looking for—no more thumbing through an index, then flipping page after page trying to find the exact information you need. There's also keyword search capability. Those piles of lists, notes, and 3-ring binders you've been using are obsolete! *Handbook* is delivered via email or APF website download as an Adobe PDF file on or before the 10th day of each calendar quarter; therefore, you always have up-to-date information, without hassle of sorting or filing.

If you so choose, your subscription includes six credits for telephone or email consultations with Dennis Padget, a nationally known expert in pathology/histology/cytology coding, compliance, and billing. You don't get a valuable benefit like this—worth at least \$375—from any other publisher! Please see order and pricing details below.

The following pages describe **Handbook** by sample chapter content, excerpts, and crib sheets so you can better judge its scope and the depth of each topic explanation. A subscription form and synopsis of the License Agreement are provided too.

RETURN ON INVESTMENT: Subscribers report that **Pathology Service Coding Handbook** pays for itself many times over in just the first few weeks of use. You save time coding cases, improve the accuracy and consistency of coding, stay up-to-date with Medicare initiatives, and find billable dollars you've been missing.

YOU SAVE: Save on your subscription to **Handbook** by ordering now. Pay just **\$479** for your first four quarterly editions and special bulletins as issued. Alternatively, order with the personal consultation feature and pay only **\$679**. Delivery is immediate, so order today to start reaping the benefits.

TESTIMONIALS: Here's what five current **Handbook** subscribers have to say about the text and the consultation service they get.

Accurate coding guidance used to be hard to find, but now it's all here at our fingertips.

Vicki McCarthy, Administrator, Yellowstone Pathology Institute

An invaluable resource! All the coding rules I need to know, in one place, like nowhere else.

Leigh Stacy, Administrative Manager, Stanford University Pathology

There's nothing else like it. It saves us time and helps us reduce our third-party audit exposure.

Beverly Bloedow, Coding Manager, Hospital Pathology Associates

The authoritative information I need is here when I need it, and it's always up-to-date.

Monica Wilson, Director of Billing, Indiana Pathology Institute

It's already paid for itself many times over, like no other publication we use.

Karen Murphy, Operations Director, Pathology & Lab Medicine

QUESTIONS: Still have questions? Call or email for added information. We look forward to serving you. Thank you.

Subscription Form and Service Invoice

Four Quarterly Editions for as little as \$479 per year!

(Please pay from this form. Sorry, a separate invoice can't be supplied.)

APF's Pathology Service Coding Handbook

Subscriber information:

Company (subscriber)... _____
Mailing address... _____

City/State/Zip... _____

Primary contact person:

Name... _____
Title... _____
Phone number... _____
Email address... _____

Backup contact person:

Name... _____
Title... _____
Phone number... _____
Email address... _____

Important:

In general, a subscription covers only one Medicare provider or IRS-defined legal entity; each provider/entity must have its own subscription. Please call us at 877/993-9935 for details or see the synopsis provided in the information pamphlet.

The subscriber is best described as...

- Physician or physician group practice
 Independent laboratory
 Hospital
 Management and/or billing company
 Other (specify): _____

Payment information:

Check payable to **American Pathology Foundation**;
mail check and completed form to the address below.
Call APF to pay by credit card, or subscribe on line at
www.apfconnect.org. **Select subscription option:**

- \$479** without personal consultations
 \$679 includes 6 personal consultations

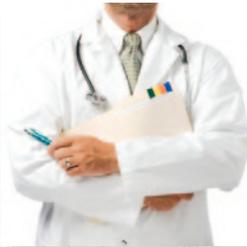

License agreement:

Your use and distribution of the **Handbook** are governed by a license agreement that's effective upon our acceptance of your subscription. Call us at 877/993-9935 for the complete agreement.

- A. Scope and objectives
- B. Limitations and subscriber responsibilities
- C. How to use the Handbook
- D. Subscriber comments/suggestions are welcome
- E. Subscriber license agreement
- F. Acknowledgements

Chapter 1 – Introduction to CPT[®]/HCPCS (with basic ground rules)

Chapter 2 – ICD-9-CM diagnosis coding requirements

Chapter 3 – NCCI, NCD, LCD, MUE, PQRS & MOCP

Chapter 4 – Surgical pathology 88300-88309 unit of service

Chapter 5 – Surgical pathology 88300-88309 code selection

Chapter 6 – Surgical pathology add-on procedures

Chapter 7 – Surgical pathology subspecialty cases

Chapter 8 – Fine needle aspiration cytology services

Chapter 9 – Nongynecological cytology services

Chapter 10 – Cervical/vaginal cytology (Pap test) services

Chapter 11 – Consultations on outside slides/materials

Chapter 12 – Molecular and cytogenetics testing services

Chapter 13 – Transfusion medicine services

Chapter 14 – Clinical test interpretation & consultation services

Chapter 15 – Other pathology services

Chapter 16 – Form CMS-1500 Guidance

Chapter 17 – Audit proof pathology medical reports

Appendices

This is an electronic media text intended for onscreen use only; accordingly, page numbering is not relevant and isn't provided. To navigate to a particular chapter, open the Bookmark tab in the upper left corner of your screen (immediately below the toolbar), and then left-click the Adobe icon next to the chapter you want to view. (Open and close the Bookmark tab at will.) You'll be instantly transported to the beginning of the chapter, and there you'll find a navigation tool that allows you to move from topic-to-topic in the chapter. To get back to the navigation tool in a chapter, simply repeat the steps starting with the Bookmark tab.

CPT is a registered trademark of the American Medical Association. *Current Procedural Terminology (CPT)* is copyright 2012 American Medical Association. All rights reserved. Fee schedules, relative value units, conversion factors and/or related components are not assigned by the AMA, are not part of CPT, and the AMA is not recommending their use. The AMA does not directly or indirectly practice medicine or dispense medical services. The AMA assumes no liability for data contained or not contained herein. Applicable FARS/DFARS restrictions apply to government use.

The responsibility for the content of any "National Correct Coding Policy" included in this product is with the Centers for Medicare and Medicaid Services and no endorsement by the AMA is intended or should be implied. The AMA disclaims responsibility for any consequences or liability attributable to or related to any use, nonuse or interpretation of information contained in this product.

Synopsis of License Agreement Terms

*(The following license agreement synopsis is for illustrative purposes only. The complete agreement is included in the **Handbook**, and it's available from the American Pathology Foundation upon request. The terms of the license agreement are subject to change without notice or your consent.)*

You agree to use the **Handbook** only as an internal reference document to aid in the determination of the appropriate procedure and diagnosis codes to post to medical service claims for payment by third-party payers, insurers, and patients. You agree not to use, or to permit the use of, the **Handbook** as part of a commercial venture that would result in its distribution, in whole or in significant part, to persons or entities outside your practice unit (as defined below). However, it's understood and agreed that you can cite and quote from the **Handbook** as necessary to fulfill your normal business functions, such as defending your billed medical charges and appealing denials of billed charges.

You agree not to copy, or permit anyone else to copy, the **Handbook** or significant portions thereof for sharing with or distribution to persons or entities outside your practice unit. If you elect to distribute the **Handbook** to end-users within your practice unit by linking to or otherwise making the **Handbook** accessible via an Intranet or Internet website, you agree to install, monitor, and maintain such security measures as are necessary to ensure that an outsider (an unauthorized person who's neither a primary nor a secondary end-user with your practice unit) can't gain access to the **Handbook** via that website, or download or copy it from the site.

For purposes of this License Agreement, a 'practice unit' is a single legal entity, other than a parent or holding company that owns or controls multiple practice units, that employs at least one person whose job duties include medical dictation/reporting or CPT/HCPCS procedure code reporting. The intended end-user of the **Handbook** is anyone within your practice unit, but no one outside your practice unit. You understand and agree this means a 'related organization' in your frame of reference must at times nonetheless separately subscribe to **Handbook**, and you furthermore agree these decisions will be made solely by us at our reasonable discretion. The following examples illustrate, but don't necessarily define or limit, the term 'practice unit' as used herein.

- A hospital operates its own histology and cytology lab unit and bills separate from its independent practice pathologists. The hospital and the pathology group must individually subscribe to the **Handbook** if each wants to consult the text.
- A ten-physician group serves three hospitals, but it has only one Medicare provider number and one IRS employer identification number. Only one **Handbook** subscription is needed by this ten-person group, even though the physicians regularly work at different sites.
- The business office staff for a particular physician group are employed by a corporation that's separate from that which employs the physicians; nonetheless, the business office serves only the one physician group (i.e., it doesn't offer services to any other physicians). The employees of both corporations may use the **Handbook** under one subscription.
- A commercial billing company serves numerous pathology groups, and it uses the **Handbook** to ICD code client claims and to monitor each client's CPT/HCPCS coding accuracy. The billing company may not distribute (electronically or otherwise) all or material portions of the **Handbook** (including individual appendices) to its clients, or make the **Handbook** accessible to them via its website. Furthermore, billing company staff may not use the **Handbook** to assign CPT/HCPCS codes to client work; a separate subscription is required for each client for which billing agency staff determine the appropriate CPT/HCPCS codes.
- A physician practice management company owns six pathology group practices, each of which is a separate legal entity with its own federal employer tax number and Medicare provider number. The pathologists with four groups code their own cases, but the coding for the other two groups is done at the home office. Six subscriptions are required, one for each of the six owned groups; the coding unit at the home office is considered a dependent, secondary user under the described arrangement.

You agree to be responsible, at your own expense, for copying and distributing the **Handbook**, either electronically or hard copy as you may choose, to authorized secondary end-users within your practice unit. In doing so, you agree to remind each secondary end-user that he or she is bound by this License Agreement in the same way and to the same extent as you. You nonetheless assume full responsibility for ensuring each secondary end-user's compliance with this License Agreement.

You cannot assign this License Agreement, in whole or in part. We reserve and retain all rights not expressly granted to you by this License Agreement.

Chapter 1

Introduction to CPT[®]/HCPCS

(with basic ground rules)

Navigation Assistant:

Section 1.1 – Current Procedural Terminology (CPT)

- A. Use CPT (almost) exclusively
- B. Use CPT for all payers and insurers
- C. General conventions and ground rules
 - 1. Pathologists aren't restricted to path/lab codes
 - 2. Meaning of indented descriptors
 - 3. Comprehensive (complete) codes
 - 4. Building-block codes
 - 5. Add-on codes
 - 6. Exact vs. "close" codes
 - 7. Embedded notes
 - 8. Embedded examples
- D. General do's and don'ts
 - 1. Use only the most recent text
 - 2. Make your charge system fully compatible with CPT
 - 3. Avoid the "unlisted" procedure codes
 - 4. Compatible medical reports are a must

Section 1.2 – Healthcare Common Procedure Coding System (HCPCS)

- A. Scope of code coverage
- B. Administration of the HCPCS table
- C. HCPCS codes for pathologists

Section 1.3 – CPT and HCPCS procedure modifiers

- A. CPT procedure modifiers
- B. HCPCS procedure modifiers
- C. Pathology related modifiers and their use

Section 1.4 – Hierarchy of authority

- A. CMS vs. the AMA
- B. AMA vs. private insurers
- C. The role of the CAP and "experts"
- D. Reliance on "conventional wisdom"
- E. Risk management (let's get real)

CPT copyright 2012 American Medical Association. All rights reserved. Applicable FARS/DFARS restrictions apply to government use.

This chapter provides an overview of the "language" of medical billing: CPT and HCPCS codes. Section 1 describes the American Medical Association's *Current Procedural Terminology* text and taxonomy, more commonly known simply as CPT. The *Healthcare Common Procedure Coding System* (HCPCS), maintained under the auspices of the U.S. Department of Health and Human Services' (DHHS) Centers for Medicare and Medicaid Services (CMS), is described in section 2. The fundamental rules for using CPT and HCPCS are discussed there as well.

Section 3 presents the CPT and HCPCS code modifiers that pathologists and pathology laboratories need to use (or at least be aware of) to assure prompt claim processing and proper payment by third-party payers and private medical insurers.

Chapter 2

ICD-9-CM Diagnosis Coding Requirements

Navigation Assistant:

Section 2.1 – Diagnosis coding mandate

- A. **Billing** physician/supplier must furnish ICD-9 code to Medicare
- B. **Ordering** physician must give reason for diagnostic test
- C. **HIPAA** makes ICD-9 universal

Section 2.2 – ICD-9 overview

Section 2.3 – Basic rules for using the book

- A. **Abbreviations** and syntax conventions
 - 1. **Lead** vs. indented descriptions
 - 2. **Fourth** and fifth digit indicators
 - 3. **Include** and exclude notes
 - 4. **Other** and unspecified codes
 - 5. **Other** notes
- B. **Neoplasm** coding conventions
 - 1. **Definition** of neoplasm
 - 2. **Classification** of neoplasms
 - 3. **Rules** for coding neoplasms
 - 4. **Steps** for coding neoplasms
 - 5. **Important** nuances
 - 6. **Practical** and compliant vs. theoretically precise
- C. **Other** coding conventions
 - 1. The **Pathologic** diagnosis is the principal diagnosis
...Including biopsies & polyps from screening **colonoscopy**
 - 2. Report the **Clinical** diagnosis if no pathologic diagnosis exists
 - 3. Don't report an **Uncertain** diagnosis
 - 4. **Secondary** (coexisting) diagnoses are seldom reported
 - 5. Report codes to their greatest level of **Specificity**
 - 6. **Physician** reports must be complete
- D. **V- and E-Codes** for special use

Section 2.4 – Myths and misconceptions in pathology ICD-9 coding

CPT copyright 2012 American Medical Association. All rights reserved. Applicable FARS/DFARS restrictions apply to government use.

Whereas CPT® is this country's universal "language" for describing medical procedures and services, ICD-9 is the common "tongue" spoken by healthcare professionals, providers, payers, and insurers when discussing diseases and disorders that afflict patients—diagnoses, in other words. ICD-9 is used by payers and insurers to determine whether the medical procedures billed by providers are *medically necessary*, in which case they're typically a *covered benefit* for the beneficiary or insured person, all other things equal.

ICD-9 is the acronym we use here to refer to the text *International Classification of Diseases, Ninth Revision, Clinical Modification* (formal acronym, ICD-9-CM). ICD-9-CM is the "gold standard" for reporting patient diagnostic information to payers and insurers; in fact, reporting diagnostic information on insurance claims using ICD-9 is mandated by federal law, including the Health Insurance Portability and Accountability Act (HIPAA).

The objective of this chapter is to provide practical guidance for selecting and reporting ICD-9 codes for the pathology and laboratory procedures you deal with day in and day out. Tools to

Chapter 3

NCCI, NCD, LCD, MUE, PQRS and MOCP

Navigation Assistant:

Section 3.1 – National Correct Coding Initiative (NCCI)

- A. [Background](#)
- B. [NCCI](#) vs. coverage policy
- C. [Managing](#) CMS vs. AMA coding rules
- D. [Fundamental](#) NCCI rules
- E. [The](#) paired-code edit tables
- F. [NCCI](#) rules for pathologists [*Subsidiary navigation tool provided*]
[Rules for anesthesia; evaluation and management (E/M) services; cervical/vaginal cancer screening and Pap smear procurement; therapeutic phlebotomy services; clinical pathology consultative services; reflex immunofixation and immunoelectrophoresis tests; molecular test interpretations; bone marrow aspiration and biopsy surgical procedures; bone marrow aspirate smear interpretations; FNA and tissue biopsy cases; cytopathology services; flow cytometry interpretive services; surgical pathology tissue exam unit of service; slide consult vs. evaluation & management services; consultations on outside slides; immunohistochemistry and flow cytometry are “duplicate” tests; quantitative immunohistochemistry tests; DNA ploidy and S-phase analysis; reporting FISH tests; touch prep with frozen section; surgical pathology microscopic exam includes gross]
- G. [Using](#) modifiers to bypass the NCCI edits
[Frequent pathology need for modifier 59; [NCCI](#) on using modifiers; CMS [Article](#) about modifier 59]

Section 3.2 – National coverage determinations (NCD) [*Subsidiary navigation tool provided*]

[Gastric bypass surgery for obesity; intestinal bypass surgery; endoscopy; apheresis (therapeutic apheresis); extracorporeal photopheresis; screening and diagnostic Pap smears; screening pelvic exam; cytogenetics studies; electron microscope; colorectal cancer screening tests; percutaneous image-guided breast biopsy]

Section 3.3 – Local coverage determinations (LCD)

Section 3.4 – Medically unlikely edits (MUE)

[NCCI [Warning](#) about excessive use of modifiers to bypass edits; correcting or [Appealing](#) an MUE denial]

Section 3.5 – Physician quality reporting system (PQRS)

Section 3.6 – Maintenance of certification program (MOCP)

CPT copyright 2012 American Medical Association. All rights reserved. Applicable FARS/DFARS restrictions apply to government use.

Medicare’s National Correct Coding Initiative (NCCI) controls how pathologists and laboratories report CPT® or HCPCS codes in combination with one another when filing claims with Part A or Part B Medicare Administrative Contractors for histology, cytology, and clinical pathology services to program beneficiaries. Sometimes NCCI’s advice for reporting professional and/or technical services is directly at odds with the way the American Medical Association (AMA) tells you to report those same services.

National coverage determinations (NCD) by CMS (Centers for Medicare and Medicaid Services within the U.S. Department of Health and Human Services) influence the ICD-9-CM diagnosis codes you report for lab services to Medicare beneficiaries, and they can mean the difference between getting paid for your services and having to write off all or part of the patient

Chapter 4

Surgical Pathology 88300-88309 Unit of Service

Navigation Assistant:

Section 4.1 – Think “specimen” when reporting 88300-88309

- A. **Tissue** or tissues
- B. **Individual** and separate attention
- C. **Individual** examination and pathologic diagnosis
- D. **More** exceptions/more rules
- E. A **Policy** you can live with

Section 4.2 – Purebred specimen vignettes

- A. **General** rule: multiple undifferentiated purebred specimens
- B. **General** rule: multiple separate purebred specimens
[For example: biopsy, cervix and many other organs; brain, biopsy/tumor resection/other than tumor resection; breast/brain, image-guided core needle biopsy; breast lumpectomy, tylectomy, etc. (partial mastectomies); breast reduction mammoplasty; cervix, conization; curettings, endocervix/endometrium; hemorrhoids; lymph node biopsy; parathyroid gland; pituitary tumor; polyp, colon/cervical/upper GI; polyps, nasal/sinusoidal; sentinel lymph node; sterilization specimens; tag, anus or skin; thyroid lobe; tonsil; turbinates (concha); upper GI biopsies]

Section 4.3 – Hybrid specimen vignettes

- A. **Naturally** occurring hybrid specimens [*Subsidiary navigation tool provided*]
[Chiefly, but not limited to: abortion; abscess; bone fragments; bone resection; brachial (branchial) cleft cyst; cyst; ethmoid tissue; extremity amputation or disarticulation; femoral head; fetus; finger; hernia sac; joint resection; placenta; products of conception; sinus contents/ethmoid tissue; skin; thyroglossal duct cyst; toe]
- B. **Artificially** construed hybrid specimens [*Subsidiary navigation tool provided*]
[Chiefly, but not limited to: acromioclavicular joint; appendix with cecum; calculi (stones) with gallbladder; cervix with uterus; lymph node(s) with gallbladder; omentum; regional lymph nodes with colon or small bowel; regional lymph nodes with other major organs; seminal vesicles with prostate; terminal ileum]

Section 4.4 – Multiple specimens in one bucket

[For example: colectomy; cystectomy; cystoprostatectomy; esophagogastrectomy; lung lobectomy; neck dissection, radical; nephrectomy; prostatectomy; thyroidectomy; Whipple]

Section 4.5 – One specimen in multiple buckets

[**Tonsil**(s) with or without adenoids; uterus with **Leiomyomas** (fibroids); **Ovary** with or without fallopian tube; **Breast** mastectomy with regional lymph nodes; **Larynx** resection with regional lymph nodes; **Uterus** with or without tubes and ovaries]

CPT copyright 2012 American Medical Association. All rights reserved. Applicable FARS/DFARS restrictions apply to government use.

Gross and microscopic tissue examinations are the “bread and butter” work of pathologists, so it’s appropriate that we spend a considerable amount of time in this Handbook on the principles, rules, and nuances governing CPT[®] coding for this class of medical services. But, realistically, the information you need to know about coding this work is too vast to effectively convey in a single chapter. Hence, we’re splitting up the topic between this chapter and the next, devoted to service unit versus level of service respectively.

Chapter 5

Surgical Pathology 88300-88309 Code Selection

Navigation Assistant:

Section 5.1 – Basic rules for the 88300-88309 codes

- A. All codes have a 26 and TC component
- B. Each service is “complete”...
- C. ...but not “all-inclusive”
- D. Reporting code 88300
- E. Reporting codes 88302-88309
- F. NCCI considerations

Section 5.2 – Keyword definitions and coding nuances

Section 5.3 – Steps to accurate code selection

Section 5.4 – Coding macroscopic (gross-only) examinations

Section 5.5 – Coding discrete specimens for microscopic examination

- A. Abdominal organs/tissues, NOS
[For example: adrenal gland, diaphragm, gallbladder, hernia sac, liver, omentum, pancreas, peritoneum, spleen]
- B. Amputations
- C. Bone and joint tissues
- D. Breast
- E. Cardiopulmonary and vascular systems
- F. Colon
- G. Head and neck tissues
- H. Neurological and musculature tissues
- I. Organs/tissues, NOS
[For example: cell block, cyst NOS, lymph node(s), sentinel lymph node(s), surgical margin NOS, thymus]
- J. Reproductive organs of the female
- K. Reproductive organs of the male
- L. Skin tissue
- M. Soft tissue
- N. Upper GI tract
- O. Urinary tract

Section 5.6 – Coding major surgical resections with commingled tissues [*Section topic tool*]

[Surgical procedures discussed include breast mastectomy, cystoprostatectomy, gastrectomy, hysterectomy, laryngectomy, neck dissection, prostatectomy, thyroidectomy, tonsillectomy and adenoidectomy, and Whipple]

CPT copyright 2012 American Medical Association. All rights reserved. Applicable FARS/DFARS restrictions apply to government use.

This chapter presents the principles, rules, and nuances for reporting procedure codes for the “bread and butter” work of a pathologist: gross and microscopic tissue examinations. Process considerations—for example, who should code and when—are also discussed. CPT[®] (HCPCS Level I) codes 88300-88309 are featured in this chapter.

Section 1 presents the fundamental concepts, principles, and rules that apply to these codes. The general Medicare National Correct Coding Initiative (NCCI) rules that implicate H&E light microscopy examinations are also discussed.

Chapter 6

Surgical Pathology Add-On Procedures

Navigation Assistant:

- Section 6.1 – Add-ons and report documentation
- Section 6.2 – Decalcification procedure (88311)
- Section 6.3 – Histologic special stains
 - A. **Special** stains for microorganisms (88312)
 - B. **Special** stains other than for microorganisms (88313)
 - C. **Special** stains with frozen section(s) (88314)
 - D. **Histochemistry** stains for chemicals (88318)
 - E. **Histochemistry** stains for enzymes (88319)
- Section 6.4 – Intraoperative consultations
 - A. **Macroscopic** consultation (88329)
 - B. **Consult** with frozen section (88331-88332)
 - C. **Consult** with touch preparation (88333-88334)
 - D. **Endomicroscopic** image interpretation (88375)
- Section 6.5 – Immunologic special procedures
 - A. **Immunohistochemistry** (88342, 88360-88361)
 - B. **Immunofluorescence** (88346-88347)
 - C. **Flow** cytometry (88182, 88184-88189)
- Section 6.6 – In situ hybridization
 - A. To evaluate **cancer**, except in urinary tract specimens (88365-88368)
 - B. To evaluate cancer in **urinary** tract specimens (88120-88121)
 - C. To evaluate **conditions** other than cancer (88271-88275, 88291)
- Section 6.7 – Other add-on procedures
 - A. **Electron** microscopy (88348-88349)
 - B. **Morphometric** analysis, non-IHC/ISH (88355-88358)
 - C. **Nerve** teasing (88362)
 - D. **Protein** analysis of tissue (88371-88372)
 - E. **Tissue** specimen x-ray review (76098)
 - F. **Select** archival tissue for molecular studies (88363)
 - G. **Macroscopic** exam & preparation for molecular studies (88387-88388)
 - H. **Unlisted** surgical pathology procedure (88399)

CPT copyright 2012 American Medical Association. All rights reserved. Applicable FARS/DFARS restrictions apply to government use.

This chapter focuses on pathology procedures performed ancillary to the primary examination of tissue specimens, defined as the microscopic review of routine H&E slide preparations. Adjunct and ancillary procedures such as decalcification, staining for a particular organism or cellular anomaly, in situ hybridization, and electron microscopy significantly expand the pathologist's ability to develop a definitive diagnosis for individual specimens.

In the chapter sections that follow you'll learn which adjunct/ancillary procedures can be charged apart from a macro- or microscopic examination of tissue (CPT[®] codes 88300-88309), when a separate charge for such a procedure is appropriate, what CPT code to report for the particular adjunct/ancillary procedure you've just performed, how many units (charge count) of that code you can report, and how to adequately document the extra service in your medical report to facilitate charge determination and audit support.

Chapter 8

Fine Needle Aspiration Cytology Services

Navigation Assistant:

- Section 8.1 – Surgical procedure service
 - A. **Basic** rules and medical reporting
 - B. **CPT** procedure codes
 - C. **Unit** of service
 - D. **Ancillary** (add-on) services
 - E. **E/M** consultation adjunct service
 - F. **Image** guidance adjunct service
- Section 8.2 – Immediate study services
 - A. **CPT** procedure codes
 - B. **Unit** of service
 - C. **Ancillary** (add-on) services
 - D. **NCCI** and other considerations
- Section 8.3 – Primary preparation interpretation service
 - A. **CPT** procedure code
 - B. **Unit** of service
 - C. **Ancillary** (add-on) services
 - D. **NCCI** and other considerations
- Section 8.4 – Adjunct and ancillary (add-on) services
 - A. **Adjunct** preparations
 - B. **Ancillary** (add-on) services
- Section 8.5 – FNA vs. biopsy coding

CPT copyright 2012 American Medical Association. All rights reserved. Applicable FARS/DFARS restrictions apply to government use.

This chapter is devoted to pathologist fine needle aspiration (FNA) cytology services. They include, in *à la carte* fashion from a CPT[®] reporting perspective: specimen procurement (i.e., the surgical procedure itself); immediate study for specimen adequacy or rapid diagnosis; evaluation of the primary preparation (i.e., smears); examination of cell block, cytopsin, and other adjunct preparations; and review of ancillary (add-on) preparations like special stains. Less frequently encountered ultrasound procedures and evaluation and management (E/M) consultation services are also discussed in this chapter.

The FNA technique uses a long, thin needle to extract a mixture of fluid and suspended bits of tissue from a palpated or visualized mass. The mixture is expelled onto glass slides—either directly or after processing—stained, and examined through a microscope by a cytopathologist. During and/or at the end of the process the cytopathologist reports an interpretive finding to the patient’s attending physician. The cytopathologist is commonly supported by a cytotechnologist at key points in this process.

FNA is widely used as a primary diagnostic procedure with patients who have a palpable or radiologically identified firm mass in a breast, salivary gland, or superficial lymph node. The thyroid, prostate, and some soft tissues are candidates for the fine needle technique as well. When guided by ultrasound or other imaging device, FNA can be used to procure diagnostic material from deep organs such as the liver, pancreas, or esophagus.

Chapter 9

Nongynecological Cytology Services

Navigation Assistant:

Section 9.1 – Primary preparations and CPT® codes

- A. **Direct** smear preparation (88104)
- B. **Filter** preparation (simple) (88106)
- C. **Smear** and simple filter preparations (88107)
- D. **Concentrated** smear preparation (88108)
- E. **Enriched**/concentrated smear preparation (88112)
- F. **Other** source preparations (88160-88162)

[For example: sputum, nipple discharge, Tzanck smear, anal-rectal smear, ascites fluid, touch prep, semen]

- G. **Miscellaneous** preparations (88125-88140)

Section 9.2 – Unit of service for nongynecological cytology services

Section 9.3 – Adjunct and ancillary (add-on) services

- A. **Adjunct** preparations
- B. **Ancillary** (add-on) services

Section 9.4 – NCCI and other considerations

This chapter focuses on pathologist diagnostic services related to nongynecological (NGYN) cytology specimens. The specimens of interest in these regards exclude those procured by fine needle aspiration (FNA) surgical technique: FNA specimens, while technically in the NGYN class, have CPT codes that are unique to them (see 10021-10022 and 88172-88173), as more fully explained in chapter 8. For information on reporting gynecological (GYN) cytology smears (commonly referred to as Pap tests or Pap smears), please go to chapter 10.

Cytopathologists rarely if ever procure NGYN cytology specimens like washings, brushings, sputum, urine, or fluid by thoracentesis (for example), so counterparts to fine needle aspiration codes 10021-10022, to the extent they exist as separate procedures, aren't discussed herein. Likewise, a pathologist almost never conducts the equivalent of an FNA immediate study in relation to a general NGYN cytology sample, so a unique code isn't provided in CPT for that activity. (Nonetheless, refer to the 88333 topic in section 9.3B for information on reporting an intraoperative consultation and/or rapid assessment on a non-FNA NGYN cytology specimen.) The laboratory and physician services involved with NGYN cytology specimens consist almost exclusively of specimen preparation, screening, and interpretation and report.

Proper CPT reporting of NGYN cytology specimens depends principally on the type of preparation that's developed for screening and examination. Therefore, in section 1 you'll learn about the primary NGYN smear preparation methods and the CPT code that goes with each. The three designated "other source" codes (88160-88162) for odds-and-ends specimens like Tzanck smear are also discussed in section 1, together with three other codes that are rarely used.

Section 2 discusses the unit of service (charge count) for NGYN cytology professional and technical work. Section 3 talks about adjunct preparations (e.g., cell block slides) sometimes ordered secondary to the primary NGYN smears. That section also explains when ancillary services like special stains can be billed as separate services with NGYN cytology cases.

Section 4 spells out in detail the Medicare NCCI bundling/unbundling restrictions for NGYN cytology adjunct and ancillary preparations. Suggestions for medical report format and content to

Chapter 10

Cervical/Vaginal Cytology (Pap Test) Services

Navigation Assistant:

- Section 10.1 – General principles, practices and ICD-9 codes
- Section 10.2 – Pap test screening services
- Section 10.3 – Pap test physician interpretation services
- Section 10.4 – Medicare coverage and coding rules

CPT copyright 2012 American Medical Association. All rights reserved. Applicable FARS/DFARS restrictions apply to government use.

This chapter is devoted to the topics of CPT[®], HCPCS and ICD-9 reporting of cervical/vaginal cytology smears, most commonly referred to simply as a “Pap test.” (Cervical/vaginal cytology, known as “gynecological” cytology—abbreviated “GYN”—is a subspecialty within the field of cytopathology.) As you’ll learn in a moment, to a substantial degree you can “throw out the window” everything you know about CPT and ICD-9 reporting for pathology services when it comes to Pap tests: They’re subject to unique rules that can’t be surmised or extrapolated from the fine needle or non-GYN cytology rules you learned in chapters 8 and 9.

What makes the Pap test unique is that, first and foremost, it’s a cancer *screening* test; that is, the majority of the time it’s ordered in the absence of a sign or symptom of a problem with the patient’s cervix or vagina that might be attributable to cancer or a precursor of same. (Pap tests are, of course, also ordered to monitor women who have a history of cervical or vaginal cancer or a pre-cancer condition, or who are otherwise at high risk of developing cervical or vaginal cancer.) Manifestations of this unique attribute include the following:

- Only a small percentage of Pap tests—typically 12% or less—require the intervention of a physician to determine whether the cells on the glass slide are abnormal or atypical in appearance.
- No one CPT code captures both a cytotechnologist’s evaluative service and a pathologist’s diagnostic review, when the latter is medically indicated; in other words, there’s no “global service” code in CPT for a Pap test. Instead, one code (88141) is provided solely for the physician’s interpretive service, and several codes describe the cytotechnologist’s service, depending on the processing and/or reporting method used.
- Medicare and basically all other payers/insurers treat the cytotechnologist’s screening service associated with a GYN cytology smear as a clinical laboratory test for billing, payment, and compliance purposes, notwithstanding the fact that the codes are listed in the cytopathology section of the CPT codebook.
- Medicare coverage and proper payment for Pap tests are unusually sensitive to correct ICD-9 diagnosis coding as well as accurate CPT vs. HCPCS Level II code reporting.

Section 1 of this chapter explains the general principles and practices that should be observed when reporting and billing Pap tests. Sections 2 and 3 provide specific CPT procedure coding information for the cytotechnologist and pathologist service components of these tests. Section 4 explains the primary coverage, coding, and billing rules you must follow when performing Pap tests for Medicare beneficiaries; Medicare’s ICD-9 diagnosis coding rules for Pap test screening and physician services are included in section 4.

Heads-Up: You won’t find information in this chapter about anal-rectal cytology smears—sometimes called “anal Pap tests”—or endocervical brushings, a modern-day surgical procedure

Chapter 11

Consultations on Outside Slides/Materials

Navigation Assistant:

Section 11.1 – Ground rules

Section 11.2 – Service levels and codes

A. Code 88321 (slides only)

B. Code 88323 (slides + in-house preparation)

C. Code 88325 (slides & much more)

Section 11.3 – Basic unit of service

Section 11.4 – Add-on services

Section 11.5 – Medical reporting

CPT copyright 2012 American Medical Association. All rights reserved. Applicable FARS/DFARS restrictions apply to government use.

Complete and accurate diagnosis of surgical pathology, cytopathology, and other anatomic pathology cases not infrequently relies on the input of an outside pathology consultant who's especially knowledgeable in a particular organ system or disease. By the same token, incoming consultations form a significant business line for many academic departments of pathology, and they're an important source of varied and interesting cases for resident education as well.

This chapter describes the CPT[®] coding rules and charge support principles for pathology consultation cases. Section 1 explores the fundamental ground rules: What is a "consultation" case? Can you consult with yourself? Are intra-group consults billable? What's separately billable with a consult case, and what's not? Who can bill a consult case to Medicare?

Section 2 describes the three service levels and CPT codes that apply to outside consult cases and explains when each is reportable. The approved unit of service (charge unit) for consultation codes 88321, 88323 and 88325 is explained in section 3.

Section 4 explains when procedures like special stains are and aren't chargeable in addition to the basic consultation code (88321-88325); the commonly encountered add-on services are identified and briefly discussed as well.

Medical report considerations from the standpoint of charge determination and audit support are explained in section 5.

§11.1 – Ground Rules

CPT codes 88321, 88323 and 88325 describe the pathology service known as consultation and report on referred slides and/or materials. Standard add-on procedure codes like 88184-88189, 88312-88319 and 88342 for flow cytometry immunophenotyping, histologic special stains, and immunoperoxidase are chargeable as well under certain circumstances. You can consult on a case involving surgical pathology, cytopathology (GYN, NGYN and FNA), neuropathology, hematopathology, renal pathology, or dermatopathology slides and/or material, but codes 88321-88325 don't pertain to confirmatory or other second reviews of clinical lab medicine events. (For clinical lab medicine consultative services, please see Handbook chapter 14.)

In general, when a pathologist microscopically examines and diagnoses an H&E slide, he or she's entitled to bill a primary service code for the work. Whether the primary service code that's appropriate for reporting for a particular case is from the 88302-88309 or the 88321-88325 range depends on whether that slide (or a related slide) was earlier examined by another pathologist. (We're using surgical tissue for illustrative purposes here, but the underlying ground rule applies

Chapter 12

Molecular and Cytogenetics Testing Services

Navigation Assistant:

- Section 12.1 – Molecular diagnostics tests
- Section 12.2 – Conventional cytogenetics tests
- Section 12.3 – Molecular cytogenetics tests
- Section 12.4 – Array-based molecular probe tests
- Section 12.5 – Microdissection
- Section 12.6 – Circulating tumor cell tests
- Section 12.7 – Multianalyte assays with algorithmic analyses

CPT copyright 2012 American Medical Association. All rights reserved. Applicable FARS/DFARS restrictions apply to government use.

This chapter is devoted to molecular and cytogenetics testing services. We're still in process of fully developing this chapter, so the information is admittedly somewhat limited. We apologize for any inconvenience this may cause.

The introduction to the CPT codebook includes guidance on the difference between test results and the interpretation of tests. In brief, the AMA says that “testing” and “test results” describe facility *technical* activities or the output of those activities, while an “interpretation” describes a physician *professional* service. Furthermore, the AMA House of Delegates in November 2006 adopted a resolution that equates a “diagnosis” or an “interpretation” with the practice of medicine; as reported in the Nov. 30, 2006 edition of *Statline* (College of American Pathologists), “... the AMA now recognizes as a matter of policy that the diagnosis of disease and diagnostic interpretation of a study or studies for a specific patient constitutes the practice of medicine.”

Molecular and cytogenetics tests frequently are resulted by doctorate-level (PhD) laboratory professionals alone, without the hands-on intervention of a pathologist (MD or DO) to render an interpretation of the test, at least so far as that term is applied by the AMA. In these instances, we strongly recommend that the commentary attributed to the PhD in the report be referenced as a “result”, “impression”, or similar word that is not generally deemed to be directly equivalent to or synonymous with “interpretation” or “diagnosis”. The suggested terminology recognizes that the services of doctorate-level laboratory professionals are not covered under Medicare Part B, nor does any other payer or insurer with which we are familiar intend to cover such services as *physician* professional services. Furthermore, the suggested terminology is consistent with the applicable AMA guidance, and it should, therefore, avoid any medical/legal dispute involving state practice of medicine law.

Another third-party payer compliance issue often associated with molecular and cytogenetics test reports has to do with the focus of the commentary that constitutes or is an integral part of either a PhD result or an MD/DO interpretation. In particular, boilerplate frequently appears in these reports pertaining to clinical outcomes or treatment modalities described in the scientific and professional literature. For example, the result or interpretation may include a generalized statement such as “all patients found to have specific genetic mutations should consider entering a genetic counseling program.” Generalized boilerplate typically is heavily discounted by third-party payer and private insurer auditors as evidence of medical necessity and the exercise of professional judgment. Therefore, to the maximum extent reasonable to the circumstances, result or treatment commentary that's based primarily on broad clinical studies should be phrased in a way that focuses on the specific patient at hand; for example, the aforementioned boilerplate

Pathology Service ICD-9 Code Crib Sheet

(Warning: This crib sheet *is not* a substitute for the full, formal ICD-9 text.)

With two exceptions, this crib sheet can be used with all types of pathology cases, such as surgical, fine needle and other nongynecological cytology, molecular diagnostics, hematopathology, transfusion medicine, and clinical pathology in general. Cervical/vaginal (GYN) cytology smears (Pap tests) and cytogenetics tests (both conventional and molecular) aren't represented in this crib sheet: refer to chapter 10 for the ICD-9 diagnosis codes most frequently reportable with Pap tests and chapter 12, section 2, for those reportable with non-neoplastic conditions evaluated by a cytogenetics methodology.

Don't make extensive use of this crib sheet until you've used it side-by-side with the formal text with a large number of cases sufficient to gain comfort with its logic and premises. Never select an ICD-9 code using this crib sheet when the shortcut diagnosis doesn't match that per the patient record in every material respect. Realize that this crib sheet doesn't alert you to situations where the text recommends a second code to clarify or elaborate (e.g., cause, infectious agent).

In general, a noun (e.g., appendicitis) without an adjective (e.g., acute, chronic) is "unspecified" per the patient's medical record, so it's classified that way below. Also, a main condition is presumed to exist "without mention of" a frequent companion (e.g., perforation or rupture) when the second condition isn't listed. Never report an "unspecified" or "without mention of" code when the pathologic diagnosis is more definitive; this may mean you have to use the formal ICD-9 text—not this crib sheet—to code a particular case.

In general, a noun ending in "itis" is the organ- or tissue-specific form of the generic "inflammation" (or inflamed). When an "itis" is available, we don't list "inflammation" as a condition; for example, "inflamed appendix" is listed as "appendicitis"—the two are the same from an ICD-9 reporting perspective.

Refer to chapter 2 of the main Handbook for basic information on ICD-9 diagnosis coding principles to be applied to anatomic pathology specimens and pathologist clinical laboratory medicine services. Additional advice is provided throughout the text in conjunction with specific pathology services when appropriate to the circumstances.

Adenoids (alone)

acute adenoiditis (463)
adenoiditis (474.01)
chronic adenoiditis (474.01)
hypertrophic adenoids with adenoiditis (474.01)
hypertrophic adenoids with chronic adenoiditis (474.01)
hypertrophy (474.12)

Adrenal Gland

epithelioid cell proliferation (255.8)

Anal Cytology (Pap) Smear

Abnormal smear NOS (796.79)
ASC-H (796.72)
ASCUS (796.71)
LGSIL (796.73)
HGSIL (796.74)
High-risk HPV positive (796.75)
Unsatisfactory (796.78)

Appendix

acute appendicitis (540.9)
acute gangrenous appendicitis (540.9)
appendicitis (541)
appendix (543.9)
goblet cell carcinoid (209.11)
hyperplasia (543.0)
incidental appendix (543.9)

perforated appendix (540.0)
ruptured appendix (540.0)

Bladder

acute cystitis (595.0)
benign squamous cells (596.8)
carcinoma in situ (233.7)
chronic cystitis (595.2)
chronic interstitial cystitis (595.1)
cystitis (595.9)
degenerated urothelial cells (596.8)
hematuria NOS (599.70)
high grade transitional cell carcinoma (188.x) [see 4th digit list at 'transitional cell carcinoma']
necrosis (596.8)
poorly differentiated transitional cell carcinoma (188.x) [see 4th digit list at 'transitional cell carcinoma']
transitional cell carcinoma (188.x) [x = 0 trigone; 1 dome; 2 lateral wall; 3 anterior wall; 4 posterior wall; 5 neck; 6 ureteric orifice; 7 urachus; 8 other specified site; 9 site not specified]
urinary retention (788.20)
urothelial carcinoma (188.x) [see 4th digit list at 'transitional cell carcinoma']
urothelial carcinoma (188.9)

Blood

88304 Abortion—induced	88305 Breast, incisional biopsy
88305 Abortion—spontaneous or missed	88307 Breast, lumpectomy
88304 Abscess	88307 Breast mastectomy—partial or simple w/o lymph nodes
88302 Accessory digit, identification & report	88309 Breast mastectomy—radical/modified radical
88305 Accessory digit, diagnostic	88309 Breast mastectomy—simple with lymph nodes
88304 Acrochordon, anus/skin	88305 Breast needle core tissue biopsy
88305 Acromioclavicular joint	88307 Breast, quadrantectomy
88304 Adenoid(s)	88305 Breast reduction mammoplasty
88304 Adhesions, pelvic	88307 Breast, segmentectomy
88304 Adipose tissue (fat/fatty tissue)	88307 Breast, tylectomy
88307 Adnexa—ovary with or without tube, neoplastic	88305 Bronchus (bronchial) biopsy
88305 Adnexa—ovary with or without tube, nonneoplastic	88304 Bunion
88307 Adrenal gland resection	88304 Bursa cyst
88305 Ampulla of Vater	88304 Carpal tunnel tissue
88309 Amputation—extremity disarticulation	88304 Cartilage shavings
88307 Amputation—extremity, nontraumatic	88305 Cell block (any source)
88305 Amputation—extremity, traumatic	88304 Cerebral aneurysm
88305 Amputation—finger or toe, nontraumatic	88305 Cervical biopsy
88302 Amputation—finger or toe, traumatic	88307 Cervical cone/conization/cone biopsy
88304 Aneurysm—aortic, arterial, cerebral or ventricular	88305 Cervical cyst/polyp
88304 Anus tag	88307 Cervix amputation without uterus
88304 Aortic aneurysm (eg, abdominal, thoracic)	88307 Chips (TURB)—bladder
88302 Appendix—incidental	88305 Chips (TURP)—prostate
88304 Appendix—other than incidental	88304 Cholesteatoma
88304 Appendix, testis/epididymis	88304 Cicatrix (skin scar)
88305 Arachnoid mater—other than tumor resection	88302 Circumcision—newborn
88307 Arachnoid mater—tumor resection	88304 Circumcision—other than newborn
88304 Arterial (artery) aneurysm	88305 Clot—bone marrow particle clot
88307 Arteriovenous malformation (AVM), complex	88305 Colon biopsy
88305 Arteriovenous malformation (AVM), simple	88304 Colon colostomy stoma
88304 Artery atheromatous plaque	88304 Colon diverticulum
88305 Artery biopsy/segment	88305 Colon ‘donut’ (eg, primary tissue for tumor)
88305 Axillary tail/axilla—lymph node biopsy	88304 Colon ‘donut’ (eg, primary tissue not for tumor)
88307 Axillary tail/axilla—lymph nodes regional resection	88305 Colon polyp
88304 Bartholin’s gland cyst	88309 Colon total resection w/ or w/o mesenteric lymph nodes
88305 Bladder biopsy	88309 Colon w/ or w/o mesenteric lymph nodes—segmental resection for tumor
88309 Bladder partial or total resection	88307 Colon w/ or w/o mesenteric lymph nodes—segmental resection other than for tumor
88307 Bladder transurethral resection (TUR)	88304 Colostomy stoma
88307 Bleb, pulmonary, complicated	88307 Cone biopsy of cervix
88305 Bleb, pulmonary, uncomplicated	88307 Conization of cervix (cone biopsy)
88304 Blood clot	88304 Conjunctiva biopsy or pterygium
88307 Bone (except bone marrow) biopsy or curetting	88304 Contracture—Dupuytren’s contracture tissue
88307 Bone cyst	88304 Cornea
88305 Bone exostosis	88304 Cutaneous papilloma (tag), anus/skin
88304 Bone fragment(s)—other than pathologic fracture	88304 Cyst—Bartholin’s gland
88307 Bone fragment(s)—pathologic fracture	88307 Cyst—bone
88305 Bone marrow biopsy	88305 Cyst—brachial (branchial) cleft
88305 Bone marrow particle clot	88304 Cyst—bursa
88309 Bone resection	88305 Cyst—cervix
88305 Brachial (branchial) cleft cyst	88305 Cyst—dental/oral
88307 Brain biopsy	88307 Cyst—dermoid, of soft tissue/ovary (eg, teratoma)
88305 Brain—other than tumor resection or biopsy	88304 Cyst—dermoid, skin
88307 Brain tumor resection	88304 Cyst—epidermoid
88305 Breast biopsy, without margin exam	88304 Cyst—epidermoid
88304 Breast capsule	88304 Cyst—ganglion
88305 Breast, excision of discrete lesion (eg, fibroadenoma)	88304 Cyst—hydatid
88307 Breast, excision of lesion, with margin exam	88304 Cyst—mucus retention (salivary)
88305 Breast, gynecomastia (male breast reduction)	

Medicare Medically Unlikely Edits (MUE) For Pathologists and Clinical Labs

The CPT/HCPCS codes used by pathologists and laboratories that are implicated by Medicare’s medically unlikely edit (MUE) initiative as of July 1, 2013 according to the CMS website are listed below, together with the edit limit for each code. Codes and limits highlighted in **yellow** affect pathologist professional component billing and payment under the Medicare physician fee schedule. **Warning:** CMS has withheld publication of several MUE limits affecting pathologists and laboratories; therefore, don’t consider the following list to be all inclusive. Furthermore, as a result of the CMS embargo on certain data, you may well experience MUE limit denials for CPT/HCPCS codes not included in the following list (e.g., 88304, 88305, 88307, 88342, 88185). **Heads-Up:** Evaluation and management consultation codes 99241-99245 and 99251-99255 are not accepted by Medicare; see 99201-99215 instead.
